

Static pre-drawn pixel art stores the species' scientific name so it can later be matched to a Species record. The PixelArt table has a nullable foreign key called species_id. When a matching Species is added to the database, the app updates PixelArt.species_id to reference that Species. Initially, species_id may be null because the matching Species record may not exist yet.

Tommy Pham

sprite_type
values: baby,
adult, etc.

Tommy Pham

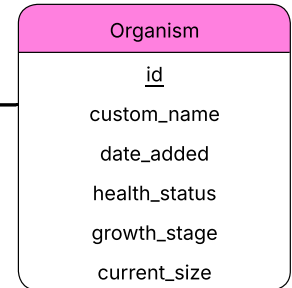

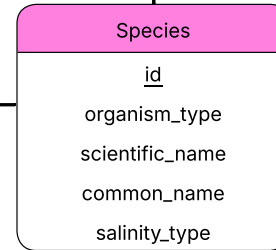

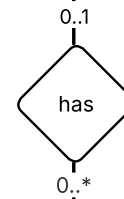

A 'Pixel Art' has
at most one (0
or 1) 'Species'

Tommy Pham

A 'Species' has
0+ 'Pixel Art'

Tommy Pham

since I couldn't possibly have
drawn at least 1 pixel art for all
the species

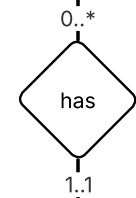

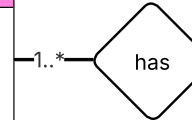

A 'Species' has
1+ 'Organisms'

Tommy Pham

An 'Organism'
has at least and
at most 1
'Species'

Tommy Pham

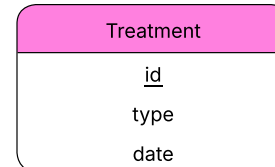

An 'Organism'
can have 0+
'Health Issue'

Tommy Pham

A 'Health Issue'
has at least and
at most one
'Organism'

Tommy Pham

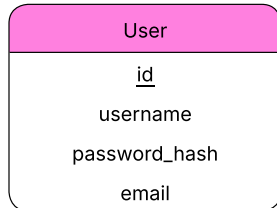

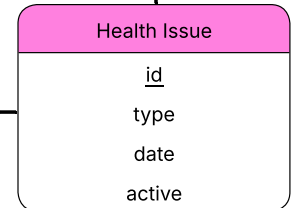

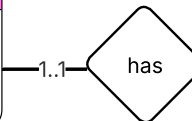

A 'Health Issue'
can have 0+
'Treatment'

Tommy Pham

A 'Treatment'
has at least and
at most one
'Health Issue'

Tommy Pham

'password_hash'
should have 'salt'
added using an
element from the
user's username

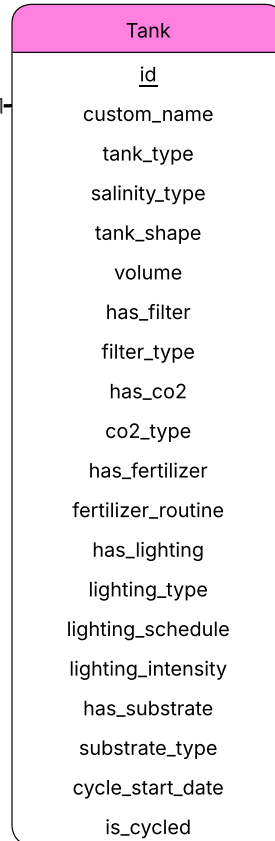

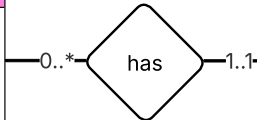

Tommy Pham

A 'Tank' has at
least and at
most one 'User'

Tommy Pham

A 'User' can
have 0+
'Tanks'

Tommy Pham

A 'Species' has
1+ 'Tank'

Tommy Pham

A 'Tank' has
0+ 'Species'
